

PHOTOGRAPHY BEIJING

Beijing's only bilingual photography center

Basic Digital Photography This foundation class helps our students understand the fundamentals of photography through camera handling, digital workflow, principles of photography and visual aesthetics. Students will learn through a balanced syllabus of lectures, practical shooting, homework assignments, critiques and reviews.	Studio Photography A basic studio and flash lighting course with a very different approach. Learn how one light strobe is sufficient for good photos when you truly understand the basics of studio lighting.	Portrait Photography A good portrait reveals the soul and personality of the photographed and the photographer. This workshop goes beyond the typical camera techniques and portrait photography tricks. Also covers studio lighting techniques, related Photoshop skills and classical study of portraiture aesthetics.
Photoshop Basics An introductory course that teaches the fundamental of Photoshop & Digital Imaging. Comprehensive approach to the entire digital workflow – image capture to print output. Students will learn about resolution, color management, tonal and color correction with levels and curves, adjustment layers and masking, non-destructive approach to digital imaging.	Travel Photography A comprehensive 4-hour workshop by our photographers who have travelled around the world from Cambodia to Cuba. Learn about microstock and how you can earn as you travel.	
Practical Photoshop Designed to help photographers adopt more efficient approaches to master digital imaging. It achieves this by showing students how to tackle real world imaging problems through creative solutions. By introducing faster ways to solve imaging problems, photographers can spend less time working on Photoshop and get back to shooting more. This workshop also encourages participants to develop their own aesthetics styles in digital imaging to complement their shooting styles.	Black & White Photography (Digital) A timeless photographic expression, students will focus on the understanding of lights and shadows, tonalities, contrasts, shapes, form and texture. Although working with digital media, students will be given a crash course on the traditional practice of film processing and wet darkroom printing. We will be re-interpreting Ansel Adam's Zone System to help students master the art of black and white shooting. A great deal of emphasis will also be placed on mastering Photoshop techniques to achieve the same darkroom effects in black and white printing.	Private Sessions We understand that our courses may not always fit with your schedule so allow us to work with yours. For more information, please contact us at info@photographybeijing.com

Course schedule accurate as of 19th November 2009, please visit our website for updated information.
